Step 2: Configure Network Credentials

For effective discovery results, provide WhatsUp Gold with the user names and passwords (credentials) necessary to connect with the devices on your network.

Note: WhatsUp Gold provides the SNMP credential "public". However, this credential typically discovers only those devices whose default credentials have not been modified.

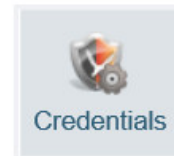

Add Credentials

To add a credential click on the credential type

- + SNMP V1
- + SNMP V2
- + SNMP V3
- + SSH
- + VMware
- + Windows (WMI)

Manage Credentials

To manage the credentials WhatsUp Gold uses for devices and databases on your network click **Credentials**

Discovery will use the following configured credential(s):

✔ public (SNMP v1)

Previous

Cancel

Next
